DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The previous rejections under 35 U.S.C. 112, first paragraph, are withdrawn due to the amendment filed February 28, 2008.

Claim Rejections - 35 USC § 102

2. The previous rejections under 35 U.S.C. 102 are withdrawn due to the amendment filed February 28, 2008.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-6, 16-19, 25-28, 53 and 54 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lee et al., U.S. 7,069,307.

Lee et al. teach the invention in a system having a plurality of clients (e.g., 160a and 160b) using remote procedure calls (RPCs, Figure 6, step 635) to access a plurality of disk volumes (150) via a switching fabric (including at least an ethernet switch 170 and a fiber channel switch 180), wherein the RPCs include volume ID information (note,

e.g., column 11, lines 26-31) and entry information (LUN) that is used to access a particular volume via network elements (125 and 126 and 128) that map requests based on the ID.

Lee et al. do not specifically mention priority or that higher priority request must be serviced before lower priority requests. However, access prioritization was well known in the data processing art since the early 1960s. Such prioritization was crucial to multiprocessor systems as well as single processor systems that had concurrent execution of memory requests.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made that higher priority request must be serviced before lower priority requests in the Lee et al. system, since the Lee et al. system was specifically designed for handling requests from multiple clients and access prioritization would have ensured that the most important requests (or requests from the most important clients) were serviced first.

Response to Arguments

5. Applicant's arguments filed with the amendment of February 28, 2008 have been fully considered but moot in view of the withdrawal of the previous grounds of rejection.

It is noted that with regard to the switch fabric, applicant's remarks are not commensurate in scope with the claimed invention. The claims do not specify any particular switch structure or any particular number of switches in the claimed switch fabric.

Allowable Subject Matter

6. Claims 7 – 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. Claims 20 – 24 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
